

GENERAL INFORMATION

The antenna connectors provide antenna connection with their various interfaces, including a pre-soldered crimp contact and housings. These connectors can be manufactured entirely according to the customer's requirements in terms of size, design and location. Thanks to its special design, it takes up little space and can be easily installed.

FEATURES

- ❖ Cable types and dimensions, connector types and terminal types can be varied
- ❖ Perforated/bent and multi-part assemblies can be produced
- ❖ Wrapping made of felt or foam as protection from sharp edges and to prevent noise emission can be installed
- ❖ Different insulation types can be applied (shrinkable tubing, overmold process, etc.)
- ❖ Various solder alloys and quantities can be used (tinned solder, silver-containing solder, etc.)
- ❖ Lead-free solder alloy versions are also available
